Address	15, Li-Te Rd., Peitou, Taipei 112, Taiwan	
Issue date	1-Jul-14	

Model name	G30AB	Year of Manufacture	2014
Representative model	G30AB	Model family list	G30AB
Product type	Desktop Computer	Product Category	Category D
Graphics Type	Discrete	dGfx Category	G7
# of Additional dGfx	NA	Add dGfx Category	NA
Memory (GB)	32	# of Storage	2
Discrete TV tuners	No	Discrete audio cards	No

The measurement methodology	ECMA-383, Measuring the Energy Consumption of Personal Computing Products
Test voltage in V and frequency in Hz	230V, 50Hz
Total harmonic distortion of the electricity supply syste	<2
The instrumentation, set-up and circuits used for electrical testing are accordance with ECMA-383	

· Power management is a process that allows displays and computers (CPU, hard drive, etc.) to enter low-power states when sitting idle.

· Inactive displays with enabled power management enter low-power modes by turning off monitor output, which can save $10 to $30(USD) per monitor annually

· The low power modes of inactive computers can involve reducing power consumption or spinning down the hard disk, which can save $15 to $45(USD) per desktop computer annually.

· The power management feature is enabled by default.

· The display is automatically set to sleep after 10 minutes of user inactivity.

· The computer is automatically set to sleep after 30 minutes of user inactivity.

· To wake your computer, click the mouse or press any key on the keyboard.
